How to give a Seminar Talk

Wolfgang Emmerich
Adapted from Material prepared by
Daniel Kroening
ETH Zürich

Why?

Because you need to learn how to do this -
you will end up having to give lots of
presentations

Outline

- Organization of a talk
- Common pitfalls
 - Fonts, Colors, Diagrams
 - Number of slides?
 - How to talk
- About this seminar
 - Contents
 - Topics
 - Administrative stuff

Content

- Goal: present research results
- Think of the audience!
 - Knows foundations of computer science
 - Does not know specific research
- Focus on concepts, not details!
- Point out advantages/disadvantages

Daniel Koenig

Organization of a Talk

Title

Title of the Talk
Name
Institution
etc.

Giving the Talk

- Allow at least two minutes per slide
 - Not enough time? Cut it!
- Keep introduction and motivation short
- Use less than a minute on outline
- Use time for complex topics instead
 - Repeat if really important
 - Use examples

Daniel Koenig

Slide Layout

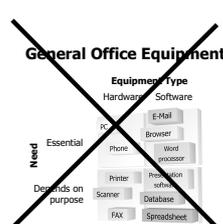

- Keep it simple!
- Use Diagrams
 - A picture says more than a thousand words
 - A picture says more than a million numbers
- Try to keep it in one line
 - Many topics cannot be explained fully with a few bullets. In such situations, one is frequently tempted to write a full definition of the problem, usually in a very small font, which is read aloud while looking at the slide when giving the talk. Instead of this, a diagram together with a few key words would always be more suited to showing the context, which can then be elaborated on in more detail orally, in the talk.

Diagrams

```

private static Method table(Method[] methods) {
    // Create instruction list to be
    // inserted in method table.
    int num = methods.length;
    InstructionList instr = new InstructionList();
    patch.accessRights(instr, methods);
    patch.accessRights(instr, methods);
    Method m;
    for (Method m : methods) {
        instr.add(m.getCode(), m.getCode(), m);
        instr.add(m.getCode(), m.getCode(), m);
    }
    return instr;
}

```

Think about the people in the back row!

Structural Figures

Better than long text

ComputerScience
Daniel Koenig

Formulas

- Use only when needed
- Use descriptive variable names

$$velocity = \frac{distance}{time}$$

- Powerpoint equation editor is bad
 - Consider Latex + Acrobat Reader
 - Consider Texpoint

ComputerScience
Daniel Koenig

Colors

- Avoid too many colors
- LCD ≠ Projector
- Background colors:
 - Yellow, orange, green, light blue
- Text colors:
 - Blue, magenta, red, dark green, orange
- Avoid distracting bitmap backgrounds

ComputerScience
Daniel Koenig

How to talk

- Know what's on your slides!
- Prepare *aide memoire* of what to say on small cards
- Don't read the slides to the audience
- Don't read the *aide memoire* either
- Never ever look at the canvas
- Seek eye contact with every member of your audience
- Break the rhythm - people fall asleep after 15 mins otherwise
- Rehearse, rehearse, rehearse

About this Seminar

- Topic:
Advanced topics in Software Engineering
- 45-50 Minutes for each talk
- Papers:
 - Have been assigned
 - Tell me if you cannot find them!

Administrative Things

- I have given you plenty of time to prepare
- Email draft of slides to me one week before talk
- I will send you feedback
- I need your slides two working days before your talk is due to be able to prepare hand-outs (and your fellow students will lynch you if they don't get them).
- Marking:
 - Presentation will not be marked
 - You will get informal feedback both after the presentation
 - A presentation is a good way to prepare for an essay

Key Points

- Fully comprehend what you are going to talk about
- Prepare good audio visual aids (e.g. using PowerPoint)
- Use examples
- Use (appropriate) graphics
- Rehearse your presentation so that
 - you know what you want to say
 - how to time it
- Seek my feedback beforehand
